

HSRP User Guide

What is HSRP?

HSRP (Human State & Representation Package) is a structured way to create a personal digital representation of yourself that can be interacted with through ChatGPT.

You can create your HSRP by talking with ChatGPT, continue adding to it over time, and later talk to your HSRP using your saved HSRP files.

First-Use Checklist

Before you begin:

- [] Have `HSRP_START_HERE.md` ready.
 - [] Use ChatGPT.
 - [] Be prepared to answer questions about yourself.
 - [] Choose a READ authorization.
 - [] Choose a separate UPDATE authorization.
 - [] Keep your HSRP and security files in a safe place.
-

1. Create Your HSRP

1. Open ChatGPT.
2. Upload `HSRP_START_HERE.md`.
3. Say:

Create my HSRP.

1. Follow the interview.
2. When you're ready to finish, ChatGPT will guide you through creating your HSRP files.

Stop and Save During Creation

You do **not** have to complete the interview in one session.

At any point, you can say:

Stop and save my HSRP.

ChatGPT should:

1. Stop the interview at the current point.
2. Preserve the information collected so far.
3. Mark incomplete or unknown areas appropriately.
4. Complete the required security setup.

5. Generate the current HSRP files.
6. Tell you what files were generated and how to continue later.

Keep the generated files safely.

When you want to continue, upload the saved HSRP files and say:

Continue my HSRP.

ChatGPT should resume from the saved state rather than starting the interview again.

2. Talk to Your HSRP

1. Open ChatGPT.
2. Upload your HSRP file and required key file.
3. Say:

Talk to my HSRP.

1. Complete the requested authorization.
2. Start talking to your HSRP.

READ/TALK access should not modify the persistent HSRP.

3. Update Your HSRP

1. Upload your HSRP file and required key file.
2. Say:

Update my HSRP.

1. Complete UPDATE authorization.
 2. Tell ChatGPT what you want to add or change.
 3. ChatGPT will create an updated version of your HSRP.
-

4. Stop and Save an Existing Session

You can also stop an UPDATE or continuing session without losing the work completed during that session.

Say:

Stop and save my HSRP.

ChatGPT should save the current authorized state and generate the appropriate updated HSRP files.

Do not treat an interrupted session as automatically saved unless the files have actually been generated and safely stored.

Important

Keep your HSRP, key, and recovery files private. Do not share them publicly.

Your HSRP should be treated as personal and sensitive data.
